Answer the following questions about the human brain and cns, then find the answers in the word find

- The three bundles of fibres connect the cerebellum to the brain stem. _____
- This area in the third and fourth ventricles of the brain produces CSF. _____
- The extension of the dura mater that separates the cerebellum from the inferior portions of the occipital lobes
_____ CEREBELLI.
- The most inferior segment of the spinal chord is the _____
- An injury to C _____ or above will most commonly result in Quadriplegia.
- This spinal ligament is so named because of its natural 'yellow' colour. _____
- The disease that causes gradual demyelination and transection of neuron axons is called
MULTIPLE _____
- The lateral foramina of the fourth ventricle that communicate with the subarachnoid cavity are called
FORAMINA OF _____
- The endocrine gland approximately the size of a pea that is located in the sella turcica is the
_____ GLAND
- The C-shaped bundle of fibres found in the brain that carry signals from the hippocampus to the mamillary bodies and the septal nuclei. _____
- The cistern located between the medulla and the cerebellum. CISTERNA _____
- This pathology is often the result of a burst cerebral aneurysm. _____ HAEMORRHAGE.
- The _____ sulcus is the location of the primary visual cortex.
- A congenital malformation in which the cerebellar tonsils are elongated and pushed down through the foramen magnum is known as _____ malformation.
- Which ventricle has anterior horns, posterior horns, inferior horns and trigone? _____
